DESCRIPTORS: *Organic solvents, *Glycols, *Ethyl-
enes, Hydrocarbons, Benzene.

Triethyleneglycol was studied as a selective solvent
and its convenience for extraction of aromatic hydro-
carbons was demonstrated. Efficiency of the multiple
stage extraction is shown. It was found, that the graphic
methods of Hunter and Nash and of Vostareyan and
Pinske for determination of the number of extraction
steps give results agreeing with the experiment and can
be applied for solution of practical problems connected
